County Medical Officer and Principal School Medical Officer

1966-1967 (Year ending 31st July, 1967)

To the Secretary of State for Scotland and the County Council of the County of Dunbarton

LADIES AND GENTLEMEN,

I beg to submit the Annual Report on the Medical Inspection and Treatment of School Children for the year ended 31st July 1967.

I am, Ladies and Gentlemen,

Your obedient servant,

SAMUEL HARVEY,

County Medical Officer and Principal School Medical Officer.

HEALTH AND WELFARE DEPARTMENT,
COUNTY COUNCIL OFFICES,
DUMBARTON.

#### IMPROVEMENTS TO SCHOOLS

During the year ending 31st July, 1967, Rosneath Primary School and St. Martin's Primary School were both replaced with complete new buildings, thus providing modern inside toilets in place of the outside isolated suites, and kitchen premises where previously meals were carried from the central kitchen.

Also, under the capital building programme, additional hutted class-room accommodation was provided at the following seven schools, which included in each case additional toilet and ablution facilities:—

- 1. St. Patrick's High School, Dumbarton
- 2. St. Stephen's Primary School, Dalmuir
- 3. Goldenhill Primary School, Hardgate
- 4. St. Joseph's Primary School, Faifley
- 5. Clydebank High School
- 6. Killermont Primary School, Bearsden
- 7. St. Ninian's High School, Kirkintilloch

As in former years, the Education Committee also approved an extensive programme of work to be carried out under the revenue account. Under this heading, replacement and additional sanitary fittings were fitted in thirteen schools at a total cost of £2,165, and internal redecoration and washing down of painted surfaces carried out in forty-seven schools to the value of £28,370.

In addition to the foregoing, many other minor repairs and replacements have been carried out as and when required, thus maintaining the properties in a satisfactory sanitary condition.

#### PARENTS PRESENT AT INSPECTION

School Mand Area	agemen	t	No. of Children Examined	No. of Parents Present at Routine Examinations	Per Cent.
Cumbernauld			 781	489	62.61

	Total		 6793	3552	<b>52.2</b> 8
					Dark Committee

#### GENERAL REVIEW

Routine inspection was carried out on 6793 children—
The number of children examined non-routinely, i.e., at clinics mainly, was 923.

3552 parents were present at the routine examinations.

#### PHYSICAL CONDITION

The percentage of children found to be free from all defects on routine school examination was 62.2% as against the previous session's figure of 70.4%. The percentage of children free from defects in the different age groups was as follows:

E	Entrants (5 yrs. of age)		 	• •	62.2%
S	econd Age Group (13 yrs. of ag	re)	 		62.6%
7	hird Age Group (16 vrs. of age	)	 		59.1 %

82.4% of the children examined had already been immunised against diphtheria.

#### DEFECTS AND DISEASES

Total No. of boys examined (all areas) Total No. of girls examined (all areas)	 • •	• •	3366 34 <b>27</b>
	 • •		6793

#### Clothing:

During the session three children were found to have unsatisfactory clothing.

#### Footwear:

No children were found to have unsatisfactory footwear.

#### Uncleanliness:

0.3% of the children systematically examined were found to be in a verminous condition of head and/or body. The numbers were five boys and seventeen girls.

#### Skin Diseases:

Ringworm: No ringworm of the body was discovered.

Impetigo: Eight cases of impetigo of the head were discovered during the session and one case of impetigo of the body.

Scabies: Eight children were found to be suffering from scabies during the year.

#### **Nutrition:**

Twenty-six of the children examined were found to be suffering from defective nutrition. Twenty-three of them were classified as 'slightly defective'.

#### SCHOOL DENTAL SERVICE

Report by Felix A. Cassidy, Chief Dental Officer

As I shall reach retiral age in a few weeks' time, this is my final annual report.

The work undertaken during the session was, including that carried out by the part-time officers, equivalent to the services of 10 full-time dental officers. Three vacancies existed in the staff throughout the year despite repeated efforts to obtain recruits to fill them.

For many years, we have been largely dependant on and grateful for the service rendered by young female dental graduates most of whom, however, retired on marriage having served only one or two years. At present, six of the whole time dental officers are males, of whom three are under thirty years of age.

When the school population within the County was around 26.000 an establishment of thirteen dental officers was sanctioned, today the school population is over the 40,000 mark and is steadily on the increase. These facts may give some indication of the problem facing the department. Another factor, one which is not always fully appreciated, is that dental disease, especially in the modern child is a recurrent disease and when a child is rendered dentally fit through treatment it is both unwise and

uneconomic if that dental fitness is not maintained. This requires periodic 'check ups' followed by further treatment when this is found necessary.

During the past decade much progress has been made in the field of dentistry in the development of new drugs, techniques and equipment for the treatment of dental disease, while on the other hand little progress has been made towards its prevention.

In co-operation with the Scottish Home and Health Department a dental pack was issued during the year to every five year old child attending school within the County for the first time. This project was aimed at stimulating in the children a greater practical interest in oral hygiene.

Each dental pack contained a child-size toothbrush, a tube of toothpaste and a 'Happy Smile Card' which when completed would earn a 'Happy Smile Badge'.

There is no doubt that children on admission to school are at a very impressionable age and much benefit should result from instruction in good dental health given at this time. It was intended that these packs be given out by the teachers but it occurred to me that here was a unique opportunity for each dental officer to meet these small children, in most cases for the first time, under more pleasurable circumstances than normally is the case and it was therefore arranged that the teacher introduced the dental officer to the class and explained the purpose of the visit. Following this the dental officer described the contents of the pack and demonstrated how the teeth should be cleaned, then personally presented a pack to each child. The entire visit to the class occupied some 15-20 minutes in each school. There is no doubt in my mind that when many of these children attend the local clinic for treatment at a later date, rapport, that all essential factor between dentist and small child will more rapidly and readily be established because of this preliminary contact having been made.

While the distribution of these packs to the five year olds is certainly a a step in the right direction we must go further in prevention.

From various dental surveys which I have carried out in areas throughout the County over the past five years, I have found that on average the five year old child has five of his or her temporary or Foundation Teeth either decayed, filled or extracted. Fluoridation, which I advocated primarily in my annual report of 1950 would give considerable protection to these teeth when in operation.

There are, however, areas in the County where Fluoridation may for one reason or another not be possible for some considerable time and for such areas I feel there should be made available as an interim measure, a method which has been in operation over the past few years in the Scandinavian Countries. This method involves the fortnightly rinsing of the mouth by the children with a 0.2 p.p.m. sodium fluoride solution but

could only be made really effective when the child attends school where the measure could be carried out under suitable supervision which could be provided by, for example, a dental hygienist. I would stress, however, that this method does not offer the same extent of protection against dental decay as Fluoridation.

The world's leading authorities in dentistry are agreed that all the causative factors of dental decay are not yet known. There should, therefore, be initiated a close liason between local authority dental services, the universities and dental schools so that working together, yet each in its separate sphere, many of the theories on the causes of dental decay could be made the subject of research and some facts obtained. There is nowhere a greater field of clinical material for the study of dental decay than in the school population and while the treatment of existing dental lesions is imperative—treatment alone will not solve this ever increasing problem. Prevention is the only complete answer.

#### **EDUCATION COMMITTEE**

#### DEPARTMENT OF SPEECH THERAPY AND SPEECH TRAINING

Report by Miss N. M. MAXWELL, Chief Therapist and in charge of the Departments of Speech Therapy and Speech Training.

The dual department has continued to proceed along the lines of last session, and, over all, it is obvious that many of our children are gaining some command of, and fluency in the use of the spoken word. It is important to note the development of mental poise and self-management shown in the speech situations provided for them, and their pleasure and satisfaction in carrying out these assignments. A very full programme has been carried out despite the fact that we are not fully staffed.

Speech Therapists are still in very short supply. In this respect, however, we are not so severely bereft as some of the neighbouring Counties and South of the Border. Though we have continued to make available clinical training for students, at the request of Sir Henry Wood, now that the School of Speech Therapy has come under the wing of Jordanhill College, there have been no applications this session so far for our available posts. We are hopeful that we may aquire a capable Senior and perhaps one other Assistant before the start of the new Session. On the other hand we are fortunate that there is no indication of losing any at this time. At present we have only three full-time and five part-time therapists on the staff. Nevertheless, an effort has been made to cover our ever expanding County, but a few of the Centres have had to be cut to one half-day per week where formerly it had been a whole day. Two Clinics had to be discontinued for a time, one of these being the Medical Centre in Cumbernauld to which there was transport difficulty. The Depute Director took steps to resolve the situation, and in a very short

time it was re-opened to deal with the urgent needs of the New Town. The excellent team of therapists have worked industriously to cater for all urgent cases and to treat the bulk of the others, part-time staff offering extra sessions in order to cope. Waiting lists have been kept to a minimum. Every referral has been dealt with, either by the therapist on duty in the school concerned, or by myself, and always help and advice have been given to the parents pending the child's admission. Parents have also had the benefit of consultation at all times, and we have to thank the E.N.T. Specialists, Dr. G. Hood and Dr. Land, for their prompt attention to our. patients and for valuable help and advice throughout treatment. Harvey and the Medical staff support us continually with early referral, medical history, and accommodation in the Health Clinics, particularly for the pre-school child. This continues to be a most rewarding part of the work when little ones with delay and difficulty can be prepared to take their part in the normal life of the Infants' room. The information furnished by the Health Visitors and Nurses concerning the home background of those under treatment is one of our greatest assets, and Mrs. Keith, the Audiometrician, is meticulous in supplying the result of all hearing tests. Mr. Murray Allan works unceasingly to make suitable facilities available for the service throughout the County.

We have continued to service the Vale of Leven Hospital with three to four sessions per week, covering all patients in the units requiring speech therapy treatment.

On the Speech Training side staffing has been a little better, and all the members have worked hard to maintain standards of clear, useful speech, and to fulfil all commitments of oral projects. At the beginning of the session Mrs. Headden, Miss Marshall and Miss McLeod were appointed to the staff to replace two who had left, but in April Miss McLeod went away to take further study, and a visiting teacher from America who had come over to do Secondary work had to return to her own country. We were very fortunate in replacing them for the final term with Mrs. Thomson, part-time doing Primary work and Mr. Kinnaird, part-time in Secondary. They will continue with us and we extend to them a very warm welcome to the department, and also to Miss Watt who is joining us in August.

The scheme of work in Primary Schools embracing the stages of II, IV, VI and VII, (with other groups inserted where possible) has been continued as formerly, reserving one period for the Post-therapy child's individual rehabilitation. Thirty-five primary schools have been supplied with a teacher of speech training for one day each week. In the interests of continuity and progress, the teachers are retained in their same schools for as long as they remain on the staff unless special circumstances make a change necessary. This year we have endeavoured to make assessment of oral ability at the Primary VII stage, by both oral and written tests, to pass

on as a guide in their transition to Secondary education. Thirteen secondary schools were allocated a teacher of speech training one day per week, and close integration with English subjects continued. I would thank the Heads of these departments for their willing and valuable co-operation in the planning and projects. I had the opportunity this year to talk with one of the English Panels, and was satisfied to find complete understanding and agreement in our common aims for better oral ability.

Our two main projects in addition to the regular schemes of work were Inter-Schools' Drama and the Children's own Travelling Theatre. The former had three presentations, two from Primary at Dalreoch and Kilbowie respectively, involving approximately 420 pupils, and one at St. Columba's in which 136 secondary pupils took part. These performances attained a very good standard and were perhaps, among the best presented so far. We had excellent co-operation from the Art and Music departments and instrumental groups were included in the Secondary Schools Programme. The Travelling Theatre made twelve visits to schools, including Arrochar and Garelochhead, with items by different casts drawn from nineteen schools and involving approximately forty children each time. This project has gained such popularity that we were unable to fulfil all the requests, but we hope to carry out the remainder at the start of the new session. I am most grateful to Mr. McNair, in charge of transport, and his drivers, for carrying out closely-timed arrangement for the Theatre Bus with such efficiency. There is no doubt that these undertaking create a tremendous interest in speech in the schools and in the homes, and I acknowledge with thanks the valuable co-operation of head teachers, class teachers, some of the parents, and all who in any way contribute to the success of these projects. We are indebted to the Directors for advice and support, and to the County staff for clerical

The combined staff, by their zeal and untiring devotion to the work of the department throughout the session, have achieved most worth-while and satisfactory results.

#### SPECIAL SCHOOLS AND CLASSES

#### (1) SPECIAL SCHOOLS

#### Auchentoshan School

This school caters for mentally handicapped, physically handicapped and myopic pupils in the Western portion of the County. At the close of Session 1966/67 the numbers of pupils were:—Mentally Handicapped—158; Physically Handicapped—19; Myopic—16.

#### Achentoshan Occupational Centre

There are 68 pupils on the roll of this centre.

#### Kildrum Occupational Centre

There are 19 pupils on the roll of this centre.

#### (2) SPECIAL CLASSES

- (a) For mentally handicapped children—Lairdsland School, Kirkintilloch, with 82 on the roll (four classes).
- (b) For partially deaf children—Hartfield School, Dumbarton, with 10 on the roll (one class).

#### MILK-IN-SCHOOLS SCHEME

The average number of pupils taking milk in schools daily during session 1966-67 was 34,269 (approximately 87% of the roll).

#### MEDICAL INSPECTION OF SPECIAL SCHOOLS

During the present session 128 children (73 boys and 55 girls) were examined. Of these 77 were mentally handicapped (educable) and 51 were mentally handicapped (ineducable); while 1 had congenital deformities. Clothing and foot gear were satisfactory in all cases. Two children were found in a verminous condition and 7 children were found to have unhealthy mouths. Forty-three parents were present at the medical examinations and notices were issued to all parents whose children were found to be suffering from a particular defect.

#### ULTRA-VIOLET LIGHT TREATMENT

The following are details of the work done at Dumbarton, Clydebank, Kirkintilloch, Bearsden, Alexandria, Helensburgh, Croy, Milngavie and Goldenhill Clinics during the year.
